SEARCH CARD

233. Device under subclass 231 wherein said securing means is separate from the tool and is a helically ribbed member rotated about the axis of the helix to hold the tool in position by inter-engagement between the tool and the tool support.

SEARCH CARD

181. Device under subclass 153 in which the displacement of the tool is caused by a member having a helically ribbed surface rotatable relative to a cooperating surface so that the ribbed surface and the cooperating surface are relatively displaced along the axis about which the helically ribbed surface rotates; whereby, a tool connected to one of the surfaces is displaced; wherein, the member having a helically ribbed surface is rotatable about an axis that intersects and is normal to the tool-axis.
